

#	Recurring Weekly Task	Classification	Rationale
1	Contribute to Open Source(review issues, implement fixes/features, submit pull requests)	Collaborate with AI	AI helps me understand unfamiliar codebases, generate implementation ideas, and review code, but I write, test, and validate the final contribution before submitting the pull request.
2	Preparing for Internship and Hackathon	Just Me	These require my own understanding and must represent my individual performance.
3	Debug JavaScript, React, or Node.js errors	Delegate to AI with review	AI finds likely causes quickly, but I verify every fix before using it.
4	Learning JS ,React and Typescript Theory	Just Me	These require my own understanding and i do it for my basics
5	Getting into Construction Business	Just Me	I do understand Business and manage social and Public responses
6	Post on Social Media as Like Create Car related Contents	Collaborate with Ai	I create the Videos ,concepts and ,Thumbnails and Descriptions by AI
7	Research Paper on Snake Dataset	Collaborate with Ai	AI helps summarize research papers, explain technical concepts, and compare methods, but I read the original papers and decide which approaches are relevant to my project.
8	Generate repetitive frontend components or boilerplate	Fully automate	Standard UI templates and repetitive code can be generated efficiently and then customized

9	Review GitHub repositories before pushing changes	Collaborate with AI	AI checks for issues, but I make the final decision before committing.
10	Write Git commit messages and pull request descriptions	Fully automate	Conventional commit messages follow a predictable format that AI generates reliably.
11	Study theory subjects (Automata, DBMS, COA, Cloud)	Just Me	I Revise for my Class works
12	Write README files and project documentation	Delegate to AI with review	AI produces a strong first draft, and I edit it to accurately reflect my project.
